The environment gives our countless benefits that we can't repay our entire life. As they is connected with the forest, trees, animals, water, and air. The forest and trees filter the air and absorb harmful gases. Plants pure water, reduce the chances of flood maintain natural balance and many others.

Moreover, the environment keep a close check on the environment and its functioning, It regulates the vital systems that are essential for the ecosystem. Besides, it maintains the culture and quality of life at earth.

The environment regulates various natural cycles that happen daily. These cycles help in maintaining the natural balance between living things and the environment. Disturbance of these things can ultimately affecting the live cycle of humans and other living beings.

Q.5(A) **Write Summary of the given passages:** (07)

It is always attractive to do something interesting and to do it as well as possible, but serious injury or an unaccountable loss of form quickly halts the progress of many a young sportsman. A handful of top professionals can afford a house in London, another in the country, and a third on the French Riviera, as well as a Rolls-Royce and a yacht in the Bahamas, but most professional players just manage to gain a bare living from their sport. Outdoor life can be delightful except when the prevalent weather conditions are rain, wind, snow, fog or ice. It is flattering to hear one's name chanted with acclaim by thousands on the terraces but crowds are fickle and soon forget, once time takes its toll of muscle and mind. Tommy Lawton, the football hero of the forties, spent his later years in poverty, forgotten by all but a small band of his closest friends.

Sportsmen at the height of their profession travel the world and visit exotic places. The English cricket team may spend its winters in Australian summers and the Wimbledon women champions may spend the year bathed in sunshine, but their own social lives are disrupted and leisure hours have to be sacrificed to hard, exhausting practice. All professional sportsmen must adhere to strict training schedules to maintain their physical fitness; their lives are devoted to keeping the body in peak condition by exhausting exercise combined with a strict regime of self-discipline and moderation in food and drink.

Q.5(B) **Write Summary of the given passages:**

(07)

Elephants are very plentiful in this area. At night, they will sometimes come so close to the camp that we all have to light fires and beat empty tins to frighten them away. The noise they make can be terrifying -- not only their tremendous trumpeting, which starts on a shrill note like a horse whinnying and goes in one long roar right down the scale to a deep reverberating growl which seems to set the whole jungle vibrating, but also the mighty crashing sound as they drag huge creepers bodily off the trees and pull down fifty-foot bamboos as if they are asparagus stalks. Where elephants have been feeding, the whole jungle is devastated as if it has been swept by a tornado. Where they have bathed, the trees and foliage are plastered with mud to a height of several meters. If we had to follow in their wake, we ourselves would soon be completely covered with grey mud and clay.

Most elephants appear to be very strong swimmers, the Indian species in particular. They are able to regulate their buoyancy by swallowing air. The African forest elephant is also probably a good swimmer, as it spends a lot of time in large rivers. Both of these elephant species have been seen walking on the bottom of shallow waters, holding their trunks aloft as snorkels. The African bush elephant is not known to take to deep water deliberately, and there is considerable doubt as to whether it knows how to swim.
