Program Outcomes (POs): M.Sc. Chemistry with Specialization in Organic/Analytical/Inorganic/Physical Chemistry

PO No.	PO detail
PO₁	Depth and breadth of knowledge: To produce efficient chemistry graduates with strong fundamental knowledge to cater the global needs related to chemical sciences.
PO₂	Research and scholarship: To develop research proficiency among graduates for the effective & practical solutions of industrial and societal issues.
PO₃	Practice and usage of modern technology: To inculcate technical skills in the chemistry graduates towards the use of modern & sophisticated instruments, equipments & cheminformatic tools.
PO₄	Professional capacity and passion of learning: To empower graduates for skilful utilization of the chemical literature to identify and address various problems by complying with environmental, ethical, and safety aspects.
PO₅	Moral and aesthetic sustainability: To enrich graduates with contemporary training in professional responsibility, ethics, lifelong learning to secure placement.

Program Specific Outcomes (PSOs): M.Sc. Chemistry with Specialization in Organic/Analytical/Inorganic/Physical Chemistry

PSO No.	PSO Statement
PSO₁	To understand the core chemistry and apply subjective knowledge for the qualitative or quantitative behaviour of compounds.
PSO₂	To demonstrate practical aspects in specialized area comprising Organic/Analytical/Inorganic/Physical chemistry.
PSO₃	To design and perform a broad variety of experiments related to chemistry.
PSO₄	To communicate scientific information orally and in writing.
PSO₅	To acquire ability towards usage of the techniques, skills, and modern tools necessary for chemistry domain.
PSO₆	To comprehend and apply chemical literature for research and effective problem solving.
PSO₇	To create advance skill for the evaluation of experimental results and extend the knowledge to develop competency.
PSO₈	To develop adaptability towards inter & multidisciplinary areas of chemical science.
PSO₉	To apply critical thinking for the environmental issues & sustainable development through chemistry research.
PSO₁₀	To inculcate the ability involving independent and life- long learning in context to societal needs.
PSO₁₁	To empower professional and ethical responsibility.

SEMESTER-I		
Paper No.	Course (Paper) Title	Course credit & teaching hrs
CC-101	Inorganic Chemistry	4 credits & 4 hrs/week
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Predict bonding & shapes of covalent compounds using MO & VB theories.	
2	Understand and predict the chemical and physical properties of S- block elements.	
3	Classify coordination compounds & predict isomerism, coordination number, shapes and spectral term symbol for coordination compounds.	
4	Explain labile and inert metal complexes with its mechanism.	
5	Outline theoretical and practical aspects of nano materials.	

SEMESTER-I				
CC-101		Inorganic Chemistry	4 hrs./Wk	4 Credits
Sr. No.	Course Detail			Inst. Hrs.
Unit.1	Atomic Model & Bonding Atomic Model, Structure & Bonding, Bond Parameters, Molecular orbital theory, Homonuclear diatomic molecules, Heteronuclear diatomic molecules, Valance bond theory, Types of overlapping, Shapes of covalent compounds, VSEPR, Shapes of molecules having regular & irregular geometry, bent's rule.			12
Unit.2	Main Group (S-Block) Chemistry of Main group Elements of S-Block, General Trends, Physical and Chemical Properties and selected Applications.			10
Unit.3	Coordination Compounds Classification of Coordination compounds, Werner’s theory, Nomenclature, Isomerism, Coordination number, structures, shapes and Hybridisation, electronic spectra, spectroscopic terms, term symbols, calculation of spectroscopic terms.			14
Unit.4	Reaction Mechanism of Coordination Compounds Synthesis and reactions of coordination compounds, Labile and inert complexes, Types of reactions in metal complexes, Substitution in square planar complexes, Substitution reactions & mechanism in octahedral complexes, Trans effect.			12
Unit.5	Nanomaterial Definition and Introduction of nanomaterial, Size effects, Importance of nanomaterials, Classification of nanomaterials, Properties of nanomaterial, Synthesis techniques of nanomaterials, Inorganic Nanoparticles and Nano porous Materials: Oxide, catalysis. Techniques for characterisation of nanoscale materials: SEM, TEM, XRD, AFM.			12

SEMESTER-I		
Paper No.	Course (Paper) Title	Course credit & teaching hrs
CC-102	Organic Chemistry	4 credits & 4 hrs/week
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Understand the concept of various electronic effect and its applications.	
2	Calculate aromaticity and differentiate between aromatic, anti-aromatic and non-aromatic compounds.	
3	Understand concept and types of reaction mechanism, draw arrow notation, categorize bond cleavages, and generation of reactive intermediates.	
4	Explain reaction mechanism and identify the reagent for the C-C bond forming reactions.	
5	Illustrate preparation of organic reagents and recognize appropriate reagent for particular reaction.	

SEMESTER-I			
CC-102	Organic Chemistry	4 hrs./Wk	4 Credits
SR No.	Course Detail	Inst. Hrs.	
Unit.1	Reactive Organic Intermediates Inductive effect, Resonance effect, Hyperconjugation effect and its applications (Stability, Acidity, Basicity, Nucleophilicity, Aromatic character), Homolytic and Heterolytic fission, Different types of arrow notation, concept and Examples of Electrophiles and Nucleophiles. Hybridization, Structure, Generation, Stability, Reactivity & Applications of Carbocation, Carbanion, Free radicals, Carbenes, Nitrenes, Ylides, Benzyne and Enamines. Applications and related reactions Aromaticity Introduction, Criteria of aromaticity, Hückel's rule, Examples of aromatic, anti-aromatic and non-aromatic compounds. Aromatic character for Annulenes, Azulenes & Heterocycles.	14	
Unit.2	Organic Reactions Principal, mechanism and applications of: Appel reaction, Benzoin condensation, Nef reaction, Prins reaction, Mitsunobu reaction, Vilsmeier-Haack reaction, Blanc Reaction, Riemer-Tiemann, Michael addition, Dieckmann condensation, Robinson annulations, Arndt-Eistert, Corey-Fuchs alkyne synthesis, Nazarov cyclization.	10	
Unit.3	Rearrangements Principal, mechanism and applications of: Pinacol-pinacolone, Wagner-Meerwein, Demjanov, Benzil-Benzilic acid, Favorskii, Beckmann, Schmidt, Baeyer-Villiger, Lossen rearrangement, Neber rearrangement, Baker-Venkataraman rearrangement	10	
Unit.4	Conjugate addition & C-C Bond Forming Reactions Enolate, Enamine and Imine chemistry, Grignard reagents, Cuprates and other conjugate reactions. Olefination reaction: Wittig, Horner-Wadsworth-Emmons, Mc-Murry reaction. Cyclopropanation reaction (Simons-smith), Bayliss Hillman reaction,	14	

	Organocatalyzed C-C bond forming reactions: Aldol reaction, Mannich reaction and Stork enamine synthesis.	
Unit.5	Organic Reagents General mechanism, selectivity, and important applications of the following reagents: (a) Oxidative Reagents: $K_2Cr_2O_7/H_2SO_4$ (Jones reagent), CrO_3 -pyridine (Collin's reagent), hypervalent iodine reagents (Dess-Martin), Swern reagent, SeO_2 , HIO_4 , $NaIO_4$ (b) Metal hydride reduction: Boron reagents ($NaBH_4$, 9-BBN), aluminium reagents ($LiAlH_4$, DIBAL-H), Li/Na-liquid NH_3 mediated reduction (Birch reduction) of aromatic compounds and acetylenes.	12

SEMESTER-I		
Paper No.	Course (Paper) Title	Course credit & teaching hrs
CC-103	Physical Chemistry	4 credits & 4 hrs/week
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Understand thermodynamics of particle by statistical approach, derive and calculate thermodynamic properties of mono and diatomic molecules.	
2	Understand the theories of electrochemical properties with numerical problems.	
3	Justify ideal & non-ideal solutions and determination of properties of solutions.	
4	Distinguish Free energy change and its applications in chemical reactions.	
5	Classify the types, characteristics and mechanism of homogeneous & heterogeneous catalysis.	

SEMESTER-I			
CC-103	Physical Chemistry	4 hrs./Wk	4 Credits
SR No.	Course Detail	Inst. Hrs.	
Unit.1	Statistical Thermodynamics: The concepts of Ensemble, Thermodynamic probability and entropy, Maxwell-Boltzmann, Bose-Einstein and Fermi-Dirac statistics. Partition function, Molar partition function, Thermodynamic properties in term of molecular partition function for diatomic molecules, Monoatomic gases, Rotational, Translational, Vibrational and Electronic partition functions for diatomic molecules. Problems.	14	
Unit.2	Electrochemical cells Introduction, Ostwald dilution law, Debye-Huckel theory of mean ionic activity coefficients, Decomposition potential and its determination, over voltage, hydrogen over voltage, factors affecting over voltage, importance of hydrogen over voltage, Tafel equation. numerical problems. Commercial cells: Fuel cell, lead accumulator, nickel iron accumulator, zinc silver accumulator.	10	
Unit.3	The Properties of Solutions Ideal solutions: Properties, the Duhem-Margules equation, vapour pressure curves. Composition of liquid and vapour in equilibrium influence of temperature on gas solubility and solid-liquid equilibria. Non ideal solutions: Deviation from ideal behavior, vapour pressure curves, liquid and vapour compositions. General equations for liquid mixtures, Dilute solutions: Henry's law. Determination of molecular weights from freezing and boiling points. Problems.	12	
Unit.4	Free Energy and Chemical Reactions Chemical equilibrium and the equilibrium constant: Equilibrium in homogeneous gaseous systems. Homogeneous reactions in liquid solutions. Homogeneous reactions in dilute solutions. Chemical equilibria in heterogeneous systems. Free energy change in chemical reactions: The reaction isotherm, standard free energy of reaction, the direction of chemical variation of equilibrium constant with pressure and temperature. Influence of temperature on heterogeneous reactions. Integration of	14	

	the Van't Hoff equation. Variation of standard free energy with temperature, problems.	
Unit.5	Catalysis • Introduction, Types of catalysis (Homogeneous & heterogeneous), comparison between them, general characteristics of catalytic reaction. • Heterogeneous catalysis: kinetics of unimolecular and bimolecular surface reaction. • Homogeneous catalysis: types of acid base catalysis, Mechanism and kinetics of acid-base catalysis • Enzyme catalysis- Mechanism and kinetics of enzyme catalysed reaction. • Nanocatalysis, types, applications.	10

SEMESTER-I		
Paper No.	Course (Paper) Title	Course credit & teaching hrs
CC-104	Analytical Chemistry	4 credits & 4 hrs/week
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Understand basic concepts of analytical techniques.	
2	Apply various traditional analytical methods for chemical analysis.	
3	Identify principles and applications of green chemistry.	
4	Discuss optical methods and apply for chemical analysis.	
5	Explain thermal methods and apply them for thermal analysis.	

SEMESTER-I				
CC-104		Analytical Chemistry	4 hrs./Wk	4 Credits
SR No.	Course Detail			Inst. Hrs.
Unit.1	Fundamentals of Analytical Chemistry & Chemical Calculations Analytical chemistry, its functions and applications, Analytical problems and procedures, Analytical techniques and methods, Concentration units (Molarities, Normality, Formality, ppb, ppm, mole calculation, Empirical Formulas, % composition, Determination of molecular weight, theoretical yield, Percent Yield, Problems			12
Unit.2	Analytical Methods Solution equilibria, Electrochemical reactions, Potentiometry, pH and its control, Titrimetry I: acid–base titrations, Complexation, solubility and redox equilibria, Titrimetry II: complexation, precipitation and redox, titrations, Gravimetry, Voltammetry and amperometry, Conductimetry			10
Unit.3	Green Chemistry Introduction, importance and twelve principles of Green Chemistry. Designing a green synthesis using these principles. Green Chemistry in day-to-day life. Green solvents (alternatives of organic solvents). Ionic liquids, supercritical fluids, CO ₂ and H ₂ O and aqueous phase organic synthesis. Non-traditional greener alternative approaches: green reagents, catalysis, biocatalysis. Applications of non-conventional energy sources: Microwave, ultrasonic assisted synthesis, electro-synthesis and sunlight (UV), radiation assisted synthesis.			14
Unit.4	Optical Methods Refractive index: Introduction, Principle, Instrumentation, Measurement of refractive index, abbe refractometer, immersion refractometer, application. Polarimetry: Introduction, Principle, Instrumentation, optical purity, calculations.			12
Unit.5	Thermal Methods of Analysis Principle, theory and instrumentation of TGA, DTA and DSC. Factors affecting thermal analysis. Applications of thermal methods in various field of science. Various theories of thermal analysis for evaluation of kinetic parameters and analysis of simple and polymeric compounds.			12

SEMESTER-I		
Paper No.	Course (Paper) Title	Course credit & teaching hrs
CP-105	Practical	6 credits & 12 hrs/week
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Perform qualitative analysis of an inorganic mixture containing six radicals.	
2	Perform inorganic complex synthesis and its characterization.	
3	Utilize Conductivity meter, pH & Potentiometer, Refractometer and Polarimeter for physicochemical analysis.	
4	Perform experiments on Partition Co-efficient, First and second order reactions-order determination, energy of activation, Heat of vaporization.	
5	To examine adsorption isotherms.	

SEMESTER-I			
CP-105	Practical	12 hrs./Wk	6 Credits
SR. No.	Practical Detail	Lab Hours	
1	Inorganic Chemistry Practical (50 Marks)	6	
	1. Inorganic Qualitative Analysis (25 Marks) Analysis of a mixture containing six radicals including one less common metal ion: W, Tl, Ti, Mo, Se, Zr, Th, Ce, V and Li. (Minimum 10 mixtures) 2. Preparation and Characterisation of metal complexes (25 Marks): 1. Preparation and Characterisation of $[\text{VO}(\text{AcAc})_2]$. 2. Preparation of cis & trans $[\text{Cr}(\text{Ox})_2(\text{H}_2\text{O})]$. 3. Preparation and Characterisation of $[\text{Co}(\text{Py})_2\text{Cl}_2]$. 4. Preparation of $[\text{Cu}(\text{gly})_2]$ & $[\text{Cu}(\text{acac})_2]$. 5. Preparation and Characterisation of $[\text{Cu}(\text{NH}_3)_4]\text{SO}_4 \cdot \text{H}_2\text{O}$ 6. Preparation and Characterisation of $[\text{Ni}(\text{NH}_3)_6]\text{Cl}_2$ compare with $[\text{Ni}(\text{H}_2\text{O})_6]\text{Cl}_2$. 7. Preparation and Titrimetric Estimation of $[\text{Fe}(\text{HCO}_2)_2] \cdot 2\text{H}_2\text{O}$. 8. Preparation and Characterisation of $[\text{Ni}(\text{en})_3]\text{Cl}_2 \cdot 2\text{H}_2\text{O}$ 9. Synthesis of bis(salicylidene)ethylene diamine cobalt (II) complex. 10. Synthesis of bis(8-quinolinol) bis(benzylidene)ethane-1,2-diamine Ni(II) complex.	6	
2	Physical Chemistry Practicals (50 Marks)	6	
	Group-A (25Marks): Conductometry: 1. To determine concentration of mixture $\text{HCl} + \text{CH}_3\text{COOH} + \text{CuSO}_4 / \text{HCl} + \text{Oxalic acid}$ vs. $\text{NH}_4\text{Cl} / \text{NaOH}$ by conductometrically. 2. To determine the equivalent conductance of a strong electrolyte and to verify the Onsager's equation. 3. To determine the degree of hydrolysis and hydrolysis constant. 4. Determine the CMC of a surfactant by conductivity measurements.	6	

	5. To determine the Equivalence conductance and dissociation constant of strong electrolytes and weak electrolytes and hence to verify ostwald's distribution law. pH metry: 1. To determine normality and dissociation constant of tribasic acids using 0.1N NaOH by PHMetrically 2. To determine the Hammett constant for p-amino/ nitro benzoic acid using 0.1N NaOH by PH-Metry. 3. To determine the standard oxidation potential of the Quinhydrone electrode. 4. To determine the acidic and basic dissociation constants of amino acid and its isoelectric point by pH-metry. 5. Determine the dissociation constant and strength of borax solution pH-metrically. Potentiometry: 1. Determination of dissociation constant of dibasic acids. 2. Determination of activity and activity coefficient of ions. 3. Redox titration- Fe^{2+} vs Ce^{4+}, I^- vs KMnO_4. 4. Determine the amount of ferrous sulphate / ferrous ammonium sulphate in given flask potentiometrically using ceric salt solution. 5. Determine the pseudo first order rate constant for bromination of N, N – dimethylaniline/phenol. Refractometry: 1. To study the variation of refractive index with composition of given liquid and to determine the % composition of unknown mixture. 2. Determine parachor/density/refractive index of binary solutions. 3. To determine the molar refractive index of a given salt. 4. To determine the electron polarization and electron polarizability of a given salt. 5. To determine refraction equivalents of carbon, hydrogen and chlorine atoms. Group-B (25 Marks) Partition Co-efficient: 1. To study the distribution of benzoic acid between toluene & water at room temperature and hence to prove the dimerization of benzoic acid in benzene / toluene. 2. To determine equilibrium constant for the reaction between potassium iodide& iodine by the method of distribution. 3. Determine the formula of a complex between Cu^{+2} and NH_3 by distribution method. 4. Determine the equilibrium constant of the reaction $\text{I}^- + \text{I}_2 = \text{I}_3^-$ by the distribution method. 5. To study the distribution co-efficient of succinic acid between ether and water. Reaction Kinetics: 1. To determine the order of the reaction by a fractional change method. 2. To determine the temperature coefficient and the energy of activation of the reaction between KBrO_3 and KI.	
--	---	--

	- Autocatalytic reaction between KMnO_4 and oxalic acid - To determine the reaction velocity constant for the reaction between acetone & iodine - To determine the temperature coefficient and energy of activation of hydrolysis of methyl acetate catalyzed by $\text{HCl} + \text{KI}$ by fractional change method. Adsorption: - To study the adsorption of aqueous oxalic acid solution by activated charcoal and examine the validity of Freundlich and Langmuir's adsorption isotherms. - To study the adsorption of I_2 from alcoholic solution by charcoal. Polarimetry: - To determine the specific & molecular rotation of glucose/ sucrose & hence intrinsic rotation and concentration of an unknown solution of optically active compound. - To determine the rate constant for the inversion of cane sugar. - To determine % composition of D-sucrose and tartaric acid in a given mixture. Thermodynamics: - Heat of vaporization: To determine heat & entropy of vaporization of a given liquid by a kinetic approach.

M.Sc. Chemistry SEMESTER-I			
CP-106	Viva Voce	-	1 Credits
Comprehensive viva voce based on practical and core courses.			

SEMESTER-I		
Paper No.	Course (Paper) Title	Course credit & teaching hrs
CP-107	Chemoinformatic Tools	1 credits & 2 hrs/week
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Draw structures, chemical reaction, mechanism & experimental assemblies.	
2	Generate IUPAC nomenclature from structures & vice versa.	
3	Use MS Excell for data analysis and graphical representation.	
4	Search & retrieve authenticated scientific reference materials.	

SEMESTER-I			
CP-107	Chemoinformatic Tools	2 hrs./Wk	1 Credits
1. Chemical Drawing - Drawing chemical reaction, Structure drawing using templates, Structure to name and name to structure. - Drawing mechanism of reaction, Diagram of Assembly, Chiral Structure. - Reproducing reaction scheme from given research paper, 3D Chemdraw ultra. - Use of MS Excel for plotting and statistical analysis. 2. Web & Tools for Literature Search - Research Journals & publications. 3. Citation & Referencing			

SEMESTER-II		
Paper No.	Course (Paper) Title	Course credit & teaching hrs
CC-201	Inorganic Chemistry	4 credits & 4 hrs/week
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Classify organometallic compounds using ligands, calculate oxidation state and determine hapticity.	
2	Categorize organometallic reaction mechanism and discuss catalytical cycles.	
3	Understand and predict the chemical and physical properties of P- block elements	
4	Discuss the classification and role of metal ions in function of biomolecules.	
5	Outline applications of various metal and radioactive isotopes in pharmaceutical chemistry.	

SEMESTER-II				
CC-202		Inorganic Chemistry	4 hrs./Wk	4 Credits
Sr. No.	Course Detail			Inst. hrs.
Unit.1	Structure and Bonding in Organometallic Compounds Introduction, Structure & Classification, 18 Electron rule, Hepticity, Ligands in organometallic chemistry: carbonyls, nitrosyls, hydride and dihydrogen, phosphine, ethylene, and related ligands, cyclopentadiene and related ligands, alkyl, aryl, carbenes, carbynes, carbides.			14
Unit.2	Reaction Mechanism and catalytic process of organometallic complex Reactions involving gain or loss of ligands, Ligand dissociation and substitution, Oxidative addition and C-H bond activation, Reductive elimination, and Pd-Catalyzed cross-coupling, Sigma bond metathesis, Organometallic catalysts: Catalytic deuteration, Hydroformylation, Monsanto acetic acid process, Tennessee–Eastman acetic anhydride process, Wacker (Smidt) process, Hydrogenation by Wilkinson’s catalyst, Olefin metathesis, Fischer–Tropsch carbon chain growth, Ziegler–Natta polymerizations.			12
Unit.3	Main Group (P-Block) Chemistry of Main group Elements General Trends in Main Group Chemistry, Physical Properties, Electronegativity, Ionization Energy, Chemical Properties. selected Applications (Inorganic Polymers).			14
Unit.4	Bioinorganic Chemistry Bio-Inorganic Chemistry Introduction, classification of elements according to their action in the biological system, deficiency, and toxicity, metalloenzymes: classification of biomolecules containing metal ions, metalloporphyrin: introduction, characterization of porphyrins, oxygen carrier and storage, hemoglobin (Hb) and myoglobin (Mb) in oxygen transfer mechanism & functions, biological electron transport proteins: iron-sulfur protein and cytochromes			10
Unit.5	Selected Topics Inorganic Pharmaceutical Chemistry Introduction, Alkali and Alkaline earth metals as drug, pharmaceutical application of boron and aluminium compounds, transition metal complexes as potential medicinal agent, Radioactive compounds and their clinical applications, Chelation therapy.			10

SEMESTER-II		
Paper No.	Course (Paper) Title	Course credit & teaching hrs
CC-202	Organic Chemistry	4 credits & 4 hrs/week
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Understand concept, types and mechanism of multicomponent reaction with applications.	
2	Apply C-C bond forming reactions using Pd- catalysis and illustrate its mechanism.	
3	Explain concept of organic photochemistry, properties of photochemical reactions and differentiate photo-induced cleavages.	
4	Understand fundamentals of stereochemistry and distinguish types of isomerism.	
5	Illustrate preparation of organic reagents and recognize appropriate reagent for particular reaction.	

SEMESTER-II			
CC-202	Organic Chemistry	4 hrs./Wk	4 Credits
SR No.	Course Detail	Inst. Hrs.	
Unit.1	Multicomponent Reactions Principle, mechanism and applications of: Biginelli, Hantzsch dihydropyridine, Mannich reaction, Doebner Quinoline Synthesis, Passerini reaction, Ugi, Malononitrile & 1,3-dicarbonyl based multicomponent reactions (chromenes and pyridine synthesis).	12	
Unit.2	Pd-catalyzed Cross-Coupling Reactions Introduction, Pd-catalysis, Various ligands, General mechanism of Cross-coupling. Principle, reaction mechanism and application of: Suzuki, Sonogashira, Heck, Negashi, Kumada, Stille, Buchwald-hartwig cross-coupling reactions.	12	
Unit.3	Photochemical Reactions Absorption of light by organic molecules, Jablonski diagram, properties of excited states, mechanism of excited state processes and methods of preparative photochemistry. (a) Photochemistry of alkenes and related compounds: Isomerization, Di- π -methane rearrangement and Cycloaddition (b) Photochemistry of carbonyl compounds: Norrish type-I cleavage of acyclic, cyclic, and unsaturated carbonyl compounds, Norrish type-II cleavage (c) Photocyclo-addition of ketones with unsaturated compounds: Paterno-Buchi reaction, Barton reaction, Photodimerisation of unsaturated ketones, Rearrangement of enones and dienones, Photo-Fries rearrangement.	14	
Unit.4	Fundamentals of Stereochemistry Isomerism, tetrahedron geometry and concept of chirality, Isomers, Classification of stereoisomerism, Optical isomerism due to tetrahedron carbon, Wedge-dash and Fisher Projections and their interconversion. Concept of enantiomers, diastereomers and meso compound. Various types of configurational nomenclature of stereocenters (one, two similar and two dissimilar stereocenters). Ring and $\square$ and diastereoisomerism-Various methods of nomenclature for acyclic and cyclic systems-cis-trans, E-Z, syn and anti.	10	

Unit.5	Important Organic Reagents: General mechanism, selectivity, and important applications of the following reagents: TEMPO, NBS, n-Bu ₃ SnH(TBTH), DDQ, TBAB, DCC, Wilkinson catalyst, Azobisisobutyronitrile(AIBN), Organosilicon reagents (TMSCl, TMSCN, Arylsilanes, Hydrosilation).	12

(2011, Fourth edition) <i>Organic Reaction Mechanism</i>. New Delhi: Narosa (ISBN: 978-81-8487-115-9).		

SEMESTER-II		
Paper No.	Course (Paper) Title	Course credit & teaching hrs
CC-203	Physical Chemistry	4 credits & 4 hrs/week
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Outline polymers and explain various polymerization reactions.	
2	Differentiate chain polymerization reactions and calculate polymer properties.	
3	Discuss types of crystals and point defects.	
4	Explain adsorption isotherms and factors affecting it. Discuss properties of colloidal system and factor affecting it.	
5	Describe kinetics of complex reaction of unimolecular and photochemical reactions.	

SEMESTER-II			
CC-203	Physical Chemistry	4 hrs./Wk	4 Credits
SR No.	Course Detail	Inst. Hrs.	
Unit.1	Polymer Chemistry Introduction, addition and substitution reaction, Cyclization reaction, cross linking reaction, reactions leading to graft and block copolymers, miscellaneous reactions. Stereo regular polymers. Polymer nomenclature. Polycondensation Reaction route of poly functional compounds. Kinetics of polycondensation reaction. Molecular weight control in polycondensation. Statistics of linear polycondensation. Effect of monomer concentration and temperature on direction of polycondensation reaction.	12	
Unit.2	Chain Polymerization (a)Free Radical Polymerization: Methods of initiating free radical polymerization. Chain transfer reactions. Kinetics of free radical polymerization and chain transfer reactions. (b)Ionic (Catalytic) Polymerization: Kinetics of cationic and anionic polymerization. Coordination polymerization. Copolymerization and its kinetics. Evaluation of reactivity ratios. (c)Polymer molecular weight; number average molecular weight, the weight average molecular weight. Problems	12	
Unit.3	Solid state Introduction: symmetry of crystal, miller indices, Types of crystals:- molecular, Network covalent, ionic, metallic, band theory, energy band theory of conductors, semiconductors and insulators, imperfections in crystal-point defect, Schottky defect, Frenkel defect, metal excess defect, line defects, quasicrystals.	10	
Unit.4	Surface Chemistry Introduction, Adsorption isotherm: Freundlich, Langmuir, Gibbs and BET of multilayer adsorption, Surface area determination, Electrokinetic (Zeta) potential and its determination by electrophoresis, factor affecting zeta potential. Colloidal state: General properties of colloidal system, Lyophobic sols and lyophilic sols, Surface active agent, Micellization: mechanism, Critical Micellar	12	

	Concentration (CMC) factors affecting the CMC of surfactants.	
Unit.5	Chemical Kinetics: Introduction, activated complex theory in terms of thermodynamic, influence of ionic strength and solvent properties on rate, Complex reactions: Opposing reactions, Consecutive reactions, kinetics of fast reaction, Ionic reactions, and salt effect. Unimolecular reactions: Lindemann-Christiansen hypothesis, Hinshelwood. Photochemical reactions: introduction, rate law, kinetics of photochemical reactions-kinetics of hydrogen-bromine, decomposition of HI and Anthracene reaction.	14

SEMESTER-II		
Paper No.	Course (Paper) Title	Course credit & teaching hrs
CC-204	Analytical Chemistry	4 credits & 4 hrs/week
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Justify method validation parameters and statistical significance of test.	
2	Understand the different criteria of Intellectual Property rights and its legislations.	
3	Illustrate pharmacopeial analysis and apply for various qualitative and quantitative assessments.	
4	Discuss methods for petrochemical analysis.	
5	Apply experimental methods for soil analysis and water sample testing.	

SEMESTER-II			
CC-204	Analytical Chemistry	4 hrs./Wk	4 Credits
SR No.	Course Detail	Inst. Hrs.	
Unit.1	Analytical Chemometrics Propagation of measurement of uncertainties, useful statistical tests: Test of significance, F- test, t-test, chi-square-test, correlation coefficient, confidence limits of mean, comparison of mean with true values. Regression analysis (least square method for linear and nonlinear plots). Statistics of sampling and detection limit evaluation. Specific study for analytical method validation by using validation parameters: (1) accuracy, (2) precision (repeatability and reproducibility), (3) linearity and range, (4) Limit of Detection (LOD) and Limit of quantification (LOQ), (5) selectivity/specificity, and (6) Robustness and Ruggedness. Problems.	14	
Unit.2	Intellectual Property Rights (IPR) Introduction, various Technical Terms, Legislation, IPA in India, Criteria for Patent, Patent for Polymorph, case studies.	10	
Unit.3	Pharmaceutical Analysis Introduction to Pharmacopeia and Pharmacopeial analysis: Physical and chemical tests: Physical verification and colour test, Loss on drying, loss on ignition, Tape and Bulk Density, Determination of moisture, limit test for heavy metals, Limit test for Halogens, Purity and assay determination by classical methods, Concept for Potency determination. Introduction of Disintegration and Dissolution tests, types of Dissolution apparatus, Types of Dissolution media, Application.	12	
Unit.4	Analysis of Petrochemical Products Petroleum: Introduction, Definition, Composition, Test methods for following: Naphtha: Aniline and Mixed Aniline point, Composition, Density, Evaporation rate, Flash point, Velocity, Volatility, Appearance, Kauri-Butanol value. Gasoline: Additives, Composition, Corrosiveness, Density, Flash and Fire point, Volatility, Water and Sediments Kerosene: Acidity, Composition, Flash and Fire point, Pour point, Density, Viscosity, Water and Sediments Diesel: Acidity, Composition, Flash and Fire point, Pour point, Density, Viscosity, Water and Sediments Distillate	12	

	Fuel oil and Mineral oil: Acidity, Composition, Flash and Fire point, Pour point, Density, Viscosity, Water and Sediments	
Unit.5	Analysis of Soil and Water Soil: Introduction, Importance of soil testing, Types of soils and analysis of soil for following: pH, Electrical Conductance, Organic Carbon, Determination of Sodium, Potassium, Boron, Phosphorous. Water: Introduction, Sampling techniques, Preservation and Pre-concentration methods, Determination of following: Total Acidity, Alkalinity, Free Carbon Dioxide, Chloride, Calcium, Magnesium, Iron, Silver, Heavy Metals, DO, COD, BOD, National and International standards for drinking water.	12
Reference Books 1. Modern Analytical Chemistry by Alka L. Gupta, Pragati Prakashan, 2nd Edition (ISBN:978-93-5140-571-9) 2. Practical Statistics (Vol 1 and 2) by Singh, Atlantic Publishers.2003. 3. SEMESTER-II		
Paper No.	Course (Paper) Title	Course credit & teaching hrs
CP-205	Practical	6 credits & 12 hrs/week
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Perform qualitative analysis of a multifunctional organic compounds.	
2	Perform synthesis of organic compounds and demonstrate its mechanism.	
3	Demonstrate and Calibration of glassware & apparatus.	
4	Prepare and standardize the solutions.	
5	Measure the % Assay and % Purity of fine chemicals.	

SEMESTER-II			
CP-205	Practical	12 hrs./Wk	6 Credits
SR. No.	Practical Detail	Lab Hours	
1	Organic Chemistry Practicals (50 Marks)	6	
	Group-A: Qualitative Analysis of Bi-functional organic compounds (Minimum 10 Compounds) (25 Marks): • Anthranilic acid • p-Aminobenzoic acid • o-Chlorobenzoic acid • m-Nitrobenzoic acid • o/m/p-Nitroaniline • Bi-phenyl amine • N, N-Dimethyl aniline • Resorcinol • Ethyl acetoacetate • P-Dichlorobenzene • o/p-Cresol • o/m/p-Toluidine • Benzanilide • Acetamide • α/β-Naphthole NOTE: Other bifunctional compounds may be asked in examination. Group-B: Single Step Synthesis (25 Marks): 1. Phenyl urea from aniline 2. m-diNitro benzene aniline from nitrobenzene. 3. Hydro quinone diacetate from hydroquinone. 4. 1,2,3,4-Tetrahydrocarbazole from Cyclohexanone 5. p-Nitroacetanilide from aniline. 6. 7-Hydroxycoumarine from resorcinol. 7. Hippuric acid from glycine. 8. Benzilic acid from Benzil 9. Phthalamide from phthlic anhydride.		

	10. Resacetophenone from resorcinol.	
2	Analytical Chemistry Practicals (50 Marks)	6
	Group-A: Analytical estimation (25 Marks) 1. Preparation and Standardization of solutions. 2. Calibration of glassware and apparatus. 3. To determine the % purity of Aspirin. 4. To determine the % of Zinc Oxide by reduce titration method. 5. To determine the amount of Calcium and Zinc in given sample. 6. To determine the volume strength of H ₂ O ₂ . 7. To determine the % purity of given Phthalic anhydride. 8. To determine the % purity of given Malic anhydride. 9. Estimation of Calcium and Magnesium in given sample. 10. To determine the amount of tin from solder wire. Group-B: Analysis of Food and Drug (25 Marks): 1. % purity of Aspirin, Paracetamol, Valproic acid, Ascorbic acid etc. 2. Total protein content in milk. 3. Peroxide value of oil sample. 4. Saponification value of oil sample. 5. Percentage of starch content in turmeric powder. 6. Amount of iodine in the given iodized salt. 7. The percentage of reducing sugars in honey sample.	
Reference Books 1 Brian S. Furniss (1989, Fifth edition) Vogel's Textbook of Practical Organic Chemistry. Hoboken: John Willey & Sons (ISBN: 0-582-462363). 2 Svehla, G. M.Sc. Chemistry SEMESTER-II			
CC-206	Viva Voce	-	1 Credits
Comprehensive viva voce based on practical and core courses			

SEMESTER-II		
Paper No.	Course (Paper) Title	Course credit & teaching hrs
CP-207	Research Writing	1 credits & 2 hrs/week
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Understand research journal, citations, impact factors and publication processes.	
2	Comprehend literature from research journals	
3	Prepare review articles using literature survey	
4	Justify research objective and methodology	

SEMESTER-II			
CC-207	Research Writing	2 hrs./Wk	1 Credits
• Various journals, data mining • Article formats, various literature search options • Recent publication, citation index • Impact factor • Review article writing preparation and submission in the given format: ▪ Title, abstract, introduction, literature survey, summary, references			

SEMESTER-III		
Paper No.	Course (Paper) Title	Course credit & teaching hrs
IC-301	Inorganic Catalysis	4 credits & 4 hrs/week
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Understand non-precious metal catalysed reactions.	
2	Discuss the use of zeolites as catalyst and understanding its applications.	
3	Describe the catalytic aspect of main group organometallic compounds.	
4	Explain the catalytic and synthetic aspect of transition metal organometallic compounds.	
5	Outline biological application and environmental aspects of organometallic compounds.	

M.Sc. (Inorganic Chemistry) SEMESTER-III				
IC-301		Inorganic Catalysis	4 hrs./Wk	4 Credits
Sr. No.	Course Detail			Inst. hrs.
Unit.1	Nickel and Iron Catalysed Reactions Nonprecious Metal Catalysis Advantages for Industry, Mizoroki–Heck Couplings in Industry with Palladium and Nickel with Enantioselective, Synthesis of oxindoles, Iron-Catalyzed Cross-coupling Reaction, Some Other Example of Iron and Nickel Catalysed reactions.			12
Unit.2	Zeolites in catalysis Natural Silicates, Introduction, Classifications, Synthesis and Characterization of Zeolites, Modification of Zeolites, Selected applications of Zeolites.			12
Unit.3	Synthetic and catalytic aspects of main group organometallic compounds Synthetic applications of main group organometallic compounds as stoichiometric reagents—organolithium, organosodium, organopotassium, organomagnesium, organozinc, organocadmium, organomercury, organoboranes, organoaluminium, organothallium, organosilicon and organotin, Catalytic applications of main group organometallic compounds			14
Unit.4	Transition metal organometallic compounds as catalysts and synthetic reagents. Activation process, Change in co-ordinated ligand reactivity, Product isolation, Synthetic (Stoichiometric) Reaction, Reaction of Isocyanides, Alkyl and Carbenes, Alkenes, Allyls and Arens.			12
Unit.5	Biological application and environmental aspects of organometallic compounds Introduction, Organometallics in medicine, Organometallics in agriculture and horticulture, Organometallics in industry, environmental aspects of organometallic compounds.			10

SEMESTER-III		
Paper No.	Course (Paper) Title	Course credit & teaching hrs
IC-302	Material Chemistry	4 credits & 4 hrs/week
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Discuss phenomena behind chemosensor and its applications.	
2	Analyse the properties of carbon quantum dots based on characteristics.	
3	Illustrate the synthetic and application aspect of carbon quantum dots.	
4	Classify MOF based on its building units.	
5	Outline synthetic process and applications of MOFs.	

M.Sc. (Inorganic Chemistry) SEMESTER-III				
IC-302		Material Chemistry	4 hrs./Wk	4 Credits
Sr. No.	Course Detail			Inst. hrs.
Unit.1	Chemosensors Introduction, Classification of chemsensors, Forces Governing Exchangeable Interactions, van der Waals Interactions and the Hydrophobic Effect, Ionic, Hydrogen Bond, and π -Cation Interactions, Covalent Interactions in Chemosensor Design, Metal Chelation Chemistry, Schiff Base Metal Complexes Based Sensors, Sensing mechanism of SB Sensor, Applications of Chemosensors.			14
Unit.2	Carbon Quantum Dots Introduction, Discovery, and Characteristics, Nanoscale Carbon Allotropes, Structural Characterization, Photophysical Properties, Physical Processes Associated with Carbon-Dots, Luminescence Properties.			12
Unit.3	Carbon Dots: Synthesis and Applications From Carbon Nanotubes, Passivation of Carbon-Dot, Electrochemical methods, solution-based Carbon-Dot synthesis, Microwave-based synthesis, Carbon-Dots from natural sources, Graphene Quantum Dots, Selected Applications.			10
Unit.4	Metal Organic Frameworks Introduction to MOFs, Types of Porous MOFs, Polytopic Pyridine-Like Ligands, Carboxylate-Based Ligands, Hetero-functional Ligands, Characterization of MOFs, Advantages of MOF Porous Materials, Nano Porous MOFs.			10
Unit.5	Metal–Organic Framework Nanomaterials MOF Derived Metal Oxides, Carbon Composites, Inorganic Compounds, Synthesis techniques of MOFs and its selected applications.			12
Reference Books

2. Ya-Ping Sun, Carbon Dots: Exploring Carbon at Zero-Dimension, Springer Nature Switzerland AG.				
3. R. Jelinek, Carbon Quantum Dots: Synthesis, Properties and Applications, Springer International Publishing Switzerland.				
4. A. Khan, M. Jawaid, A. Mohammed A. Asiri, W. Ni, and M.M. Rahman, Metal-Organic Framework Nanocomposites: From Design to Application, CRC Press, 6000 Broken Sound Parkway NW.				
5. L.R. Macgillivray, Metal-Organic Frameworks: Design and Application, John Wiley & Sons				

Inc., Hoboken, New Jersey.

6. W. Xia, Fabrication of Metal–Organic Framework Derived Nanomaterials and Their Electrochemical Applications, Springer Nature, Singapore.

SEMESTER-III		
Paper No.	Course (Paper) Title	Course credit & teaching hrs
IC-303	Instrumental Method of Analysis	4 credits & 4 hrs/week
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Define and discuss basic theory and applications of X-ray method.	
2	Illustrate fundamental techniques in fluorescence spectroscopy and its applications.	
3	Classify and relate theoretical and practical aspects of atomic emission and absorption spectroscopy.	
4	Describe theory and applications of MR Imaging techniques.	
5	Discuss the theoretical and practical aspects of flame photometry.	

M.Sc. (Inorganic Chemistry)			
SEMESTER-III			
IC-303	Instrumental Method of Analysis	4 hrs./Wk	4 Credits
Sr. No.	Course Detail	Inst. hrs.	
Unit.1	X-ray Method Introduction, generation of X-rays, X-ray diffraction, Bragg's law, X-ray powder diffraction, X-ray single crystal diffraction interpretation of diffraction pattern, applications of XRD and numerical.	12	
Unit.2	Fluorescence Spectroscopy Introduction, principle, types of fluorescence mechanism, types of chemo-sensors (eg. Rhodamine and coumarin based chemo-sensors), instrumentation, advantages and disadvantages, applications in chemistry, biology, agrochemicals, and water.	12	
Unit.3	Atomic Absorption and Emission Spectroscopy Atomic absorption spectroscopy (AAS): principle, classification of atomic spectroscopic method, measurement of atomic absorption, instrumentation, sensitivity, detection limits, application, advantages, and disadvantages Atomic Emission spectroscopy (AES): Introduction, principle, theory of emission, instrumentation, applications, advantages and disadvantages	12	
Unit.4	MR Imaging Technique Magnetic resonance imaging (MRI) - principle, instrumentation, magnetic resonance angiography, ¹ H NMR of relevant diamagnetic and paramagnetic compounds, contrast agents and clinical applications.	12	
Unit.5	Flame Photometry Introduction, principle, instrumentation, types of flame photometers, limitations of flame photometry, applications.	12	
Reference Books			
1. Fundamentals of Analytical Chemistry – Skoog, Harcourt College Publishers. 2. Quantitative chemical analysis – Vogel A. I., Pearson Education. 3. Textbook of Pharmaceutical Analysis – K. A. Connor, John Wiley & Sons, New York. 4. Quantitative Chemical Analysis – Ayer by Harper & Row, New York. 5. Instrumental Methods of Analysis by B. K. Sharma, Goel Publisher, Meerut 6. Modern Analytical Chemistry – by Alka L. Gupta, Pragati Prakashan. 7. Instrumental methods of chemical analysis – by H. Kaur, Pragati Prakashan. 8. Instrumental methods of analysis – by B. Sivasankar, Oxford University Press. 9. Principles of Fluorescence Spectroscopy by Joseph R. Lokowicz, University of Maryland, Baltimor, USA, Springer Publication.			

SEMESTER-III		
Paper No.	Course (Paper) Title	Course credit & teaching hrs
IC-304	Modern Spectroscopy	4 credits & 4 hrs/week
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Understand Principle and theory of various spectroscopy. i.e. UV-Vis, FT-IR, NMR Spectroscopy and Mass Spectrometry.	
2	Discuss Instrumentation of UV-Vis, FT-IR, NMR Spectroscopy and Mass Spectrometry.	
3	Demonstrate competence in collecting and interpreting data in the laboratory.	
4	Solve problems related to the saturation, functional group, molecular weight and structure of molecules	
5	Analyze and interpret spectroscopic data for structure elucidation.	

M.Sc. (Inorganic Chemistry) SEMESTER-III			
IC-304	Modern Spectroscopy	4 hrs./Wk	4 Credits
Sr. No.	Course Detail	Inst. hrs.	
Unit.1	Introduction to spectroscopic techniques Types of analytical techniques, introduction of instrumental methods and its classification, overview of spectroscopic methods based on wavelength regions of electromagnetic radiation, properties of electromagnetic radiation. UV Spectroscopy Introduction, theory of ultra violet spectra, instrumentation, type of transition in organic molecules; auxochrome, chromophore; explanation of bathochromic shift and hypsochromic shift, hyper chromic effects, types of bands, effect of solvent, application of UV spectra. Calculation of λ -max (1) dienes and conjugated dienes (2) enones and dienones (ie. unsaturated carbonyl compounds) (3) aromatic carbonyl system.	10	
Unit.2	Infrared Spectroscopy: Introduction to IR and FTIR, principle & theory of Infrared absorption spectrometry, infrared sources and transducers, sample handling, instrumentation, interpretation of IR spectra, applications and limitations of IR spectroscopy.	08	
Unit.3	Mass Spectroscopy Introduction, principle, theory and components of mass spectrometers, different ionization, and detection techniques, recording and resolution of mass spectrometer, types of ions produced in mass spectrometer, interpretation of mass spectra of selected compounds /API, Applications of Mass spectrometry, Introduction to ICP-MS.	08	
Unit.4	Nuclear Magnetic Resonance Spectroscopy-I Introduction, NMR active nuclei, Basic Theory, NMR Spectrometer, internal Standard & solvent. ¹ H NMR (PMR): Principle, Chemical shift, Magnetic anisotropy, spin-spin coupling (multiplicity), applications & problems of Nuclear magnetic resonance spectroscopy.	14	
Unit.5	Nuclear Magnetic Resonance Spectroscopy-II ¹³ C NMR: Introduction, Principle, chemical shift, application and problems of ¹³ C-NMR. Introduction to 2D NMR, Application of COSY, NOESY, HSQC, HMBC	12	

Structure Elucidation: Structure determination and distinction of various isomeric compounds through spectroscopic techniques (UV, IR, Mass, NMR & 2D-NMR)

SEMESTER-III		
Paper No.	Course (Paper) Title	Course credit & teaching hrs
IP-305	Practical & Viva Voce	6 credits & 12 hrs/week
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Apply understanding of reaction mechanism and reagents to perform metal complexes synthesis.	
2	Analyze product formation by using TLC monitoring, physical measurement, separation, and purification techniques.	
3	Apply UV Viz. phenomena to find out wavelength, concentration and chemical shifts of organic molecules.	
4	Interpret IR spectrum for identification of various functional group in organic molecules.	
5	Operate flame, polarimeter, UV-Visible and IR spectrophotometer.	

M.Sc. (Inorganic Chemistry) SEMESTER-III			
IP-305	Practical	12 hrs./Wk	6 Credits
SR. No.	Practical Detail	Lab Hours	
	Group A: Preparation and Estimations (50 Marks): 1. Synthesis and characterization of Ninhydrin based Chemosensor for Analyte Detection. 2. Synthesis and characterization of Rhodamine based Chemosensor for Analyte Detection. 3. Synthesis and characterization of Nickel complexes as a tetradentet ligand with a N₂O₂ donor site. 4. Synthesis and characterization of Nickel complexes with Schiff base ligands. 5. Synthesis and characterization of Bis (salisalsylidine)thiosemicarbazide Nickel Complexes. 6. Synthesis, Characterization & Theoretical treatment of Sandwich Schiff base complexes derived from urea. 7. Synthesis, Characterization & Theoretical treatment of Sandwich Schiff base complexes derived from thiourea 8. Synthesis and characterization of Fe catalyzed Green Reductive Homocoupling of Bromobenzene 9. The Oxidation of Anthracene by Hydrogen Peroxide in the Presence of VO(acac)₂ as Catalyst . 10. Synthesis and characterization of a Photoluminescent Copper(I) Complex. Group B: Instrumentation analysis (50 Marks): 1. Determination of λ max of given samples by visible spectrophotometer. 2. Determination of λ max of given samples by UV-Vis spectrophotometer. 3. Evaluation of effect of solvents on given sample and to identify the type of shift by UV-Vis spectrophotometer. 4. Control of absorbance and limit of stray light on UV-Vis spectrophotometer. 5. Calibration of polarimeter. 6. Specific rotation determination by polarimeter. 7. Estimation of metal from various water samples by flame photometer. 8. Estimation of metals from various drug samples by flame photometer.	12	

	9. Estimation of metals from various soil samples by flame photometer. 10. Determination of bleachability index (DOBI) of palm oil by UV-Vis spectrophotometer. 11. Demonstrative practicals of IR and fluorescence spectroscopy.

M.Sc. (Inorganic Chemistry) SEMESTER-III			
IP-306	Research Project Proposal & Viva Voce	4 hrs./Wk	2 Credits
Research proposal Writing Guideline (Minimum 5000 words) (100 Marks): 1. Explanation of various research funding agencies (UGC, DBT, DST, CSIR, SERB, GUGCOST) & their research support schemes. 2. Training on how to write various aspects of research proposal in given format with one example. (Title, description of problem, review of related work, national & international status, rationale for taking up project, objective of proposal, methodology, references, year-wise work plan, budget estimation etc.) 3. Assign chemistry-based research problems and its literature review. 4. Preparation and submission of one research proposal for anyone funding agency. 5. Presentation (ppt) of the prepared research proposal including all aspects. 6. Viva voce will be based on the research proposal and its various aspects.			

SEMESTER-IV		
Paper No.	Course (Paper) Title	Course credit & teaching hrs
IC-401	Selected Topics in Inorganic Chemistry	4 credits & 4 hrs/week
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Understand photochemistry of metal complexes and justify emission mechanism.	
2	Discuss the preparation and characteristics of inorganic polymers.	
3	Describe phenomena of nuclear chemistry.	
4	Outline the biomaterials and its applications.	
5	Explain the phenomenon of solar cell and its various types.	

M.Sc. (Inorganic Chemistry) SEMESTER-IV				
IC-401		Selected Topics in Inorganic Chemistry	4 hrs./Wk	4 Credits
Sr. No.	Course Detail			Inst. hrs.
Unit.1	Photochemistry of Metal Complexes Introduction, Mechanism, Excited sates, Quantum yield, Energy Dynamics and reaction mechanism, Dissociative Ligand Field-Based Photochemistry in Organometallic Compounds, Organic Light Emitting Diode, Emission Mechanisms and Material Classes.			12
Unit.2	Inorganic Polymers Introduction, general characteristics, structure, preparation, properties and applications of: (a) Phosphazenes (PNX) _{2n} (b) Borazene (B ₃ N ₃ H ₆) (c) Silicones			10
Unit.3	Nuclear Chemistry Nuclear Chemistry Introduction, Nuclear Stability, Isotopes, Isobars, Isotones, Isomers, Natural and Artificial Radioactivity, Measurement of Radioactivity, Nuclear Fission, Nuclear Reactor, Nuclear Fusion, Application of Radioactive Isotopes.			14
Unit.4	Biomaterials Introduction, Characteristics of Biomaterials, History of Biomaterials, Classification of biomaterials, Metal alloys and its Applications, Polymers in Biomedical Use, Bioceramics and its Applications, Replacement and Fixation device and its applications.			10
Unit.5	Solar Cell Introduction, History of Solar Cell, working of Solar Panels, Solar Spectrum, Solar Cells Generations, N and P Mechanism, Crystalline Silicon Solar Cells, Amorphous and Microcrystalline Silicon Solar Cells, Organic Solar Cell, Tandem Solar Cells.			14
Reference Books				
1. D.M. Roundhill, Photochemistry and Photo physics of Metal Complexes, Springer Science Business Media, New York. 2. D.W. Bahnemann, A.T. Patrocinio, Springer Handbook of Inorganic Photochemistry, Springer Nature, Switzerland. 3. S.K. Agarwala, K. Lal, Advanced Inorganic Chemistry, Pragati Prakashan, Meerut. 4. J.D. SEMESTER-IV		
Paper No.	Course (Paper) Title	Course credit & teaching hrs
IC-402	Separation Techniques	4 credits & 4 hrs/week
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Understand the principle, fundamental theory and instrumentation of various planar and column chromatographic techniques.	
2	Identify the significance, quality, and limitations of the results produced by the various separation techniques.	
3	Apply theoretical knowledge to design and develop suitable extraction techniques for separation and identification of organic/natural compounds.	
4	Calculate R _f values and Interpret HPLC and GC chromatograms to perform qualitative analysis of unknown.	
5	Differentiate various applications of separation techniques to medicinal and pharmaceutical field.	

M.Sc. (Inorganic Chemistry)				
SEMESTER-IV				
IC-402		Separation Techniques	4 hrs./Wk	4 Credits
SR No.	Course Detail			Inst. Hrs
Unit.1	Adsorption and Partition Chromatography History, introduction, classification, principles, experimental, factors affecting adsorption & partition chromatography			12
Unit.2	Planar Chromatography Principle, basic theory, technique & applications of: Paper chromatography, thin layer chromatography and high-performance thin layer chromatography			12
Unit.3	Gas Chromatography Basic theory, instrumentation, working and applications of GC & HS-GC			12
Unit.4	Liquid Chromatography Basic theory, instrumentation, working and applications of HPLC & LC-MS			12
Unit.5	Extraction Techniques Introduction, types of extraction (LLE, SSE, LSE), extraction methods (maceration, infusion, digestion, decoction, percolation, solvent extraction, soxhlet extraction, counter current extraction, sonication, supercritical fluid extraction, steam distillation) and application.			12
Reference Books

SEMESTER-IV		
Paper No.	Course (Paper) Title	Course credit & teaching hrs
IC-403	Dissertation/Project or Practical	12 credits & 24 hrs/week
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Apply critical and analytical skills in a scientific and professional manner.	
2	Plan and develop research project with critically apprising and interpretative published literature	
3	Synthesize knowledge and skills previously gained and applied to an in-depth study.	
4	Compare and select from different research methodologies, methods and forms of analysis to produce a suitable research method.	
5	Present the finding of their project in a written report.	
Practical		
Course Outcomes: Upon completion of this course, the learner will be able to		
CO No.	CO Statement	
1	Demonstrate Inorganic laboratory setup.	
2	Apply understanding of reaction mechanism and reagents to perform Inorganic synthesis.	
3	Analyze product formation by using physical measurement, separation and purification techniques.	
4	Design and develop solvent system for separation/extraction and identification of organic/natural compounds from single/multi-step reactions.	
5	Construct manual thin layer chromatography and column chromatography whenever applicable.	

M.Sc. (Inorganic Chemistry)			
SEMESTER-IV			
IP-403	Dissertation/Project or Practical	24 hrs./Wk	12 Credits
- All the students of M.Sc. Organic Chemistry will have option to undertake a research dissertation or practical during semester- IV. - The student shall pursue his/her dissertation/project work under university recognized research guide only. - Dissertation/Project Detail (200 Marks): - The student will be given the option of selecting a research problem in a preferred area that falls within the discipline of courses undertaken. - The dissertation/project work could be conducted at the institute or recognized research laboratory. In case the student carry out research work at other research laboratory, a NOC, presence report and certificate of place of work from the concern laboratory should be submitted along with the thesis. - At the end of the semester, the student is required to submit his/her results in the form of a dissertation thesis. A student must submit 3 copies of his/her dissertation at the time of evaluation duly signed by candidate, guide and head of the institution. The thesis should include plagiarism certificate duly signed by candidate, guide and head of the institution.			

- The format of the Dissertation thesis/project should be as under:
- (a) The thesis should be typewritten on A4 size paper printed on both side in Times New Roman font with 12 size.
- (b) A margin of at least 1.5 cm must be left at the left side of each page and a margin of 1.0 cm on the top, bottom, and right side of each page.
- (c) The dissertation thesis shall arrange in the following sequence: Title, introduction of research problem, aims and objectives of the research undertaken, result and discussion, experimental section with characterization of compounds including spectral analysis, conclusion, and latest references as per the scopus index research journal format.
- The evaluation (Thesis & Viva) of the dissertation/project work will be carried out during university practical examination by external examiner.

OR

Practical Details (200 Marks):

Group A: Inorganic Synthesis (100 Marks):

1. Synthesis and Characterization of Copper (II) Aspirinate and Salicylate.
2. Synthesis and Characterization of Copper (III) Dithiocarbamates.
3. Determination of ligand field Spectra of Copper (II) Complexes.
4. Determination of Network Complexes of Copper (I) halides.
5. The Synthesis of Copper(II) carboxylates revisited (acetic acid, salicylic acid).
6. Template Synthesis of Symmetrical Transition Metal Dithiocarbamates.
7. Synthesis and Characterization of Nickel(II) Complexes with substituted ureas.
8. Synthesis and Characterization of a N-Heterocyclic Carbene Nickel(II) Complexes.
9. Synthesis and characterization of Metal complexes with Schiff base ligands.
10. Synthesis and characterization of bis(salicylaldehyde)diaquacobalt(II) acetate.

Group B: Separation Chemistry (100 Marks):

1. Organic mixture separation by column chromatography (Minimum 3).
2. Inorganic mixture separation by column chromatography (Minimum 3).
3. Organic mixture separation and determination of R_f value by TLC (Minimum 3).
4. Inorganic mixture separation and determination of R_f value by TLC (Minimum 3).
5. Extraction of Eugenol from clove
6. Extraction of Caffeine from Tea
7. Extraction of Cinnamaldehyde from Cinnamon
8. Extraction of Nicotine from Tobacco
9. Extraction of Curcumin from Turmeric powder
10. Extraction of Carotenoids from Tomato

M.Sc. (Inorganic Chemistry) SEMESTER-IV			
IP-404	Dissertation /Project Viva Voce or Practical Viva Voce	-	2 Credits
- Dissertation/project viva voce will be carried out in the form of a presentation of his/her dissertation thesis. The presentation should include brief introduction, objective of research, scheme of research problem, result & discussion, spectra of compounds and conclusion of the present study. OR - Comprehensive viva voce based on practical and core courses.			

Bhakta Kavi Narsinh Mehta University Junagadh

M.Sc. Chemistry

Question Paper Pattern
(Effective from June 2024)

Unit-1 [14 marks]

Answer ALL questions

Q.1 (a)	1 Question of 4 Marks OR 2 Questions of 2 Marks Each.	4 Marks
Q.1 (b)	Answer any two questions out of three.	10 Marks
(1)		5
(2)		5
(3)		5

Unit-2 [14 marks]

Answer ALL questions

Q.2 (a)	1 Question of 4 Marks OR 2 Questions of 2 Marks Each.	4 Marks
Q.2 (b)	Answer any two questions out of three.	10 Marks
(1)		5
(2)		5
(3)		5

Unit-3 [14 marks]

Answer ALL questions

Q.3 (a)	1 Question of 4 Marks OR 2 Questions of 2 Marks Each.	4 Marks
Q.3 (b)	Answer any two questions out of three.	10 Marks
(1)		5
(2)		5
(3)		5

Unit-4 [14 marks]

Answer ALL questions

Q.4 (a)	1 Question of 4 Marks OR 2 Questions of 2 Marks Each.	4 Marks
Q.4 (b)	Answer any two questions out of three.	10 Marks
(1)		5
(2)		5
(3)		5

Unit-5 [14 marks]

Answer **ALL** questions

Q.5 (a)	1 Question of 4 Marks OR 2 Questions of 2 Marks Each.	4 Marks
Q.5 (b)	Answer any two questions out of three.	10 Marks
(1)		5
(2)		5
(3)		5
